Women athletic shoes protect the planter surface of the foot and provide traction while doing sports activity. All footwear are designed to provide some degree of motion control, however, women athlete shoes are designed to provide an enhanced level of motion control which stabilised the calcaneus and restricts rear foot mechanism movement. While running, proper cushioning of feet is very important as during this activity the force on feet can reach higher level. Women athlete shoes offer cushioning by acting as a protective layer between feet and ground that reduces the pressure on planter surface of the feet.
