The global Wood Pellets Biomass Boilers market size is predicted to grow from US\$ 8296 million in 2025 to US\$ 12270 million in 2031; it is expected to grow at a CAGR of 6.7% from 2025 to 2031.

Wood pellets biomass boilers are similar to other gasifying outdoor wood pellet stoves in that they efficiently burn fuel to heat large spaces through radiant heating or forced air systems. Because they are built to established standards, wood chip biomass boilers are a fully automated replacement for oil or gas heating systems.

Expanding demand for wood pellets in the commercial and residential heating segment has prompted producers to produce wood pellets in large quantities, which is one of the main reasons affecting the inevitable growth in the growth rate. The use of wood pellets in co-firing is also growing rapidly. The most popular sources of wood pellets remain agricultural residues and wood waste due to their widespread availability and low cost of manufacture. Because pellet boilers have a low-carbon heating system and release no carbon dioxide into the atmosphere, they are a sustainable fuel source. Pellet boilers and other whole-house pellet stoves help improve the comfort of the entire home. The market for pellets has been expanding over the past few years with increasing demand for industrial applications in large power plants and small-scale applications in home heating systems. The demand for wood pellets in commercial and home heating is driving manufacturers to mass production. Cost-effectiveness of commercial wood pellet heating systems is gaining popularity and this trend is expected to continue over the forecast period.
