The global Wood Preservative Fungicide market size is predicted to grow from US\$ 2817 million in 2025 to US\$ 3704 million in 2031; it is expected to grow at a CAGR of 4.7% from 2025 to 2031.

Wood preservatives are a class of chemicals used to protect wood from biological erosion, corrosion and decay. Since wood is susceptible to damage from fungi, insects and microorganisms, the use of preservatives can prolong the life of the wood, improving its durability and stability. Preservatives can be applied to wood surfaces by penetration, coating or soaking to form a protective layer. Future wood preservatives may not only have antibacterial and antiseptic functions, but may also add other functions, such as waterproof, fireproof, flame retardant, etc., to meet different application requirements.
