Wood Recycling is the process of turning waste timber into usable products.

Wood is one of the most valuable recyclable materials because it can be transformed into a wide variety of secondary products. That is why we carry a wide selection of wood and mulch supplies made from recycled wood, such as mulch, wood chips, compost additive, soil conditioner, animal bedding, and feedstock for engineered woods. The first and most important benefit of wood recycling is saving the trees. Even after replanting trees to make up for the ones that have been cut down, trees take an exceedingly long time to reach maturity, which means that the less we cut down in the first place, the better. Wood recycling also helps reduce environmental impact by preventing less trash from ending up in the landfills, which in turn means reduced air and water pollution.

Wood recycling is an ideal technique for ensuring that the environment is maintained in its natural state.
