A Wooden Oil Extraction Machine is a traditional type of oil extraction equipment that utilizes wood as a primary material for its construction. These machines have been used for centuries in various cultures for extracting oil from seeds, nuts, or kernels. While they may vary in design and construction, the basic principle remains the same: mechanical pressure is applied to crush the seeds or nuts and extract the oil. While wooden oil extraction machines may lack the efficiency and precision of modern mechanical or hydraulic presses, they are valued for their simplicity, affordability, and suitability for small-scale production in rural or remote areas. Additionally, their use of wood as a primary material aligns with sustainable and eco-friendly practices.

The global Wooden Oil Extraction Machine market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
