The global Wool-Specific Detergents market size is predicted to grow from US\$ 1614 million in 2025 to US\$ 2275 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

Wool-specific detergents are gentle cleaning products specially designed for protein fibers such as wool and cashmere. Their core feature is a neutral/slightly acidic formula with a pH of 5.5-7.0, matching the natural pH of wool fibers to avoid damaging the fiber's surface scale structure and prevent shrinkage, clumping, hardening, and loss of luster.

Unlike ordinary laundry detergents, wool-specific detergents are precisely gentle, aiming to effectively clean while protecting the natural structure and texture of wool fibers.

Their core principles are:

1. Gentle surfactants clean stains without damaging the protein structure.
2. Added lanolin and protein repair factors achieve 'washing and conditioning in one.'
3. Cationic encapsulation technology forms a protective film, reducing friction damage.

The upstream core raw materials for wool-specific detergents include surfactants (nonionic and amino acid-based), lanolin and its derivatives (natural lanolin, lanolin alcohol, ethoxylated lanolin), functional auxiliaries (enzymes, antistatic agents, anti-shrinkage factors, chelating agents), and special additives.

In 2025, global sales of wool-specific detergents reached 198,500 tons, with a production capacity of approximately 254,000 tons, an average selling price of US\$8.31 per kilogram, and an average gross profit margin of 58.3%.
