Worktop surface usually refers to a horizontal work surface in kitchens or other food preparation areas, bathrooms or others (e.g., laundry and bar) in general. It is frequently installed upon and supported by cabinets. The surface is positioned at an ergonomic height for the user and the particular task for which it is designed. A countertop may be constructed of various materials with different attributes of functionality, durability, and aesthetics. The countertop may have built-in appliances, or accessory items relative to the intended application.

The environment of Countertops industry, as well the manufacturing industry, has a large scale of uncertainties in next years, caused by the downward growth rate of Chinese economy and complicated global economic situation. Accompanied with limited demand growth, and more and more enterprises entering this market, the competition will be stricter. In this case, the ordinary Countertops products will have less profit and sales than high qualified products.
