A Worm Geared Motor is one type of reduction gear box which consists of a worm pinion input, an output worm gear, and features a right angle output orientation. This type of reduction gear box is generally used to take a rated motor speed and produce a low speed output with higher torque value based on the reduction ratio. They often can solve space-saving problems because the worm reducers is one of the sleekest reduction gearboxes available due to the small diameter of its output gear.

Asia-Pacific is expected to experience the highest growth in the market during the forecast period.
