The global Worm Gearing market size is predicted to grow from US\$ 272 million in 2025 to US\$ 339 million in 2031; it is expected to grow at a CAGR of 3.7% from 2025 to 2031.

In this report worm gearing includes worm and worm gears, also called worm screw and worm wheel. Worms and worm gears are gear sets that offer high gear reduction and torque multiplication with a small footprint. A worm drive is a cylindrical gear with a shallow spiral thread that engages the worm gear in a non-intersecting, perpendicular axes configuration. Efficiency of a worm drive is determined by the lead angle and the number of threads in contact with the worm gear. A high lead angle on the drive reduces frictional losses and heat. A low lead angle reduces gear speed while proportionally increasing torque. Friction is an issue with all worm sets; the worm gear cannot transfer motion back to the worm drive in most instances. Lubrication and ground teeth both contribute to the sets' overall silence while minimizing friction. Worm gear sets are usually produced in pairs due to their precision.

This market has witnessed growth owing to increased demand in industrial, commercial fields. Increased investment in Worm Gearing by leading companies is expected to favourably impact market growth over the forecast period. The Asia Pacific is expected to be the fastest-growing market over the forecast period. Worm Gearing is becoming more indispensable in emerging markets. APAC countries such as China, India currently have a low penetration rate but are expected to emerge as an attractive opportunity for vendors to venture during this period. For the Worm Gearing industry, the market is low concentrated. Franz Morat, Zahnradfertigung OTT, KHK Kohara Gear Industry are the leading companies globally and are trying to expand their market share. In this study, the sales market for Worm Gearing was divided into five geographic

regions. Asia-Pacific occupied the largest sales market share with 41% in 2019. It is followed by Europe and North America.
