The global Worm Grinding Wheel Dressing Roller market size is predicted to grow from US$ 179 million in 2025 to US$ 235 million in 2032; it is expected to grow at a CAGR of 4.0% from 2026 to 2032.

In 2024, global sales of Worm Grinding Wheel Dressing Roller reached approximately 120,000 units, with an average market price of about USD 1,450 per unit, an annual production capacity of roughly 150,000 units, and an industry-average gross margin of approximately 31%.

A Worm Grinding Wheel Dressing Roller is a specialized tool mounted on grinding machines to perform “dressing” of grinding wheels — restoring sharpness, removing clogged abrasive grains, and correcting wheel geometry. It typically features a hard?material roller (e.g., diamond or CBN) mounted on bearings and a steel shaft, used in precision industries such as automotive, bearing and gear manufacturing, and mold production.

In the supply chain: Upstream suppliers include diamond/CBN grain manufacturers, hard?alloy substrate producers and steel/shaft & bearing component makers; the Downstream comprises gear manufacturers, bearing producers, automotive component suppliers and contract grinding service providers. In terms of cost structure: raw materials account for about 57% of total cost, machining & heat?treatment about 23%, inspection, packaging & logistics about 12%, with the remainder for R&D and administrative overhead. Downstream consumption wise, a mid?sized gear plant might use around 1,000 units of dressing rollers annually to maintain its grinding wheel integrity and finishing quality.
