The global Wound Drainage Reservoir market size is predicted to grow from US\$ 24.78 million in 2025 to US\$ 37.72 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

In 2025, global Wound Drainage Reservoir production reached approximately 4.9 million units, with an average global market price of around USD 5.2 per unit.

The gross profit margin of major companies in the industry is between 28%–42%.

In 2025, the global production capacity of Wound Drainage Reservoir was approximately 6.45 million units.

A Wound Drainage Reservoir is a disposable medical container designed to collect and temporarily store fluids drained from surgical wounds. It is commonly integrated with drainage tubing and may incorporate a vacuum mechanism to support controlled fluid collection. Its core functions include collecting blood, exudate, lymphatic fluid, and other postoperative fluids while reducing leakage and facilitating monitoring of drainage volume. The product is widely used in postoperative wound management, particularly in general surgery, orthopedic surgery, thoracic surgery, breast surgery, and other procedures requiring closed wound drainage. The product boundary generally covers the collection reservoir and its integrated components, excluding standalone drainage catheters and complete drainage systems.

The upstream industry supplies medical-grade plastics, silicone, elastomers, polymer components, tubing, connectors, valves, caps, filters, and sterile packaging materials. The midstream industry performs injection molding, extrusion, component assembly,

sealing, sterilization, inspection, and packaging to manufacture wound drainage reservoirs with different capacities and structural configurations. Products can vary by reservoir volume, vacuum capability, connection design, and intended clinical application. Downstream demand primarily comes from hospitals, surgical centers, outpatient facilities, and wound-care departments. Market demand is influenced by surgical procedure volumes, postoperative drainage requirements, infection-control standards, disposable medical-product adoption, and the growing preference for closed drainage solutions.

United States market for Wound Drainage Reservoir is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Wound Drainage Reservoir is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Wound Drainage Reservoir is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
