The global Woven Wire Mesh Conveyor market size is predicted to grow from US$ 445 million in 2025 to US$ 692 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

In 2024, global annual sales of woven wire mesh conveyors will reach approximately 46,500 units, with an average price of around US$9,200. Woven wire mesh conveyors are continuous conveying equipment that utilize a stainless steel, carbon steel, or galvanized steel wire mesh belt as a load-bearing surface. Due to their high-temperature and corrosion resistance, excellent air permeability, and ease of cleaning, they are widely used in industries such as food baking and freezing, heat treatment, glass manufacturing, electronic component cleaning, chemical drying, and automotive parts painting. They operate by using a motor-driven sprocket to drive the mesh belt for smooth conveying. They support various configurations, including straight lines, curves, and slopes, and can withstand extreme temperatures of 150°C–1200°C, meeting the demands of high-intensity production. Upstream suppliers rely on suppliers of wire materials, sprockets, reduction motors, and control systems. Downstream customers primarily include food processing companies, automotive manufacturers, electronics manufacturers, and chemical and pharmaceutical companies.
