The global X-ray Acquisition Software market size is predicted to grow from US\$ 131 million in 2025 to US\$ 223 million in 2032; it is expected to grow at a CAGR of 7.9% from 2026 to 2032.

X-ray acquisition software is a specialized medical imaging software system used to control X-ray imaging equipment and achieve real-time acquisition, processing, and storage of image data. It is typically used in conjunction with digital radiography (DR), computed tomography (CT), or industrial non-destructive testing (NDT) X-ray systems. By connecting to detectors, controllers, and computer systems, this software can perform functions such as exposure control, image acquisition, image enhancement processing, data storage, and transmission. It also supports image annotation, measurement analysis, and integration with hospital information systems or industrial testing databases, thereby improving the efficiency of image diagnosis or testing. X-ray acquisition software usually features image noise reduction, contrast enhancement, automatic correction, and remote transmission capabilities, significantly improving image clarity and operational efficiency. With the increasing digitalization of medical care and the automation of industrial NDT, this software is gradually developing towards intelligence, cloud-based operation, and integration with AI-assisted analysis systems, playing an increasingly important role in medical image diagnosis, industrial quality inspection, and scientific research.

United States market for X-ray Acquisition Software is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
