X-ray Detectable Neuro Sponge Patties and Strips are specialty medical supplies used during neurosurgery. These sponge pads or strips are made of medical absorbent cotton or similar materials and have X-ray detectable materials (such as barium wires or wires) built into them for localization and identification by X-ray examination during or after surgery. .

During neurosurgery, doctors may use these X-ray detectable sponges or tampons to absorb excess blood, cerebrospinal fluid, or other fluids from the surgical area to maintain a clear surgical field. At the same time, they can also be used to cover and protect nerve tissue to prevent damage that may occur during surgery.

Due to the built-in X-ray detectable material, doctors can use X-ray examination after surgery to confirm whether these sponge pieces or tampons have been completely removed, thereby avoiding them being left in the patient's body and causing unnecessary risks.
