X-ray fluorescence silicon aluminum analyzer is a professional instrument used to detect the content of silicon and aluminum in samples. X-ray fluorescence silicon aluminum analyzer uses X-ray fluorescence analysis technology to emit X-rays to the sample to be tested, excite the atoms of silicon, aluminum and other elements in the sample, and release secondary characteristic X-rays. The energy and intensity of these released secondary characteristic X-rays are proportional to the content of silicon and aluminum in the sample. The instrument measures the energy and intensity of these secondary characteristic X-rays and calculates them using a specific algorithm to obtain the content of silicon and aluminum in the sample.
