An X-ray high-speed counter is a specialized inspection device used to rapidly count and verify items—such as tablets, capsules, or packaged goods—by analyzing X-ray images in real time. Unlike optical or weight-based counters, X-ray counters can “see” through packaging or overlapping layers, making them ideal for high-throughput, high-accuracy applications in the pharmaceutical, food, and logistics industries.

These systems combine an X-ray imaging unit with advanced image-processing software to detect the number, shape, and position of items moving along a conveyor belt or through a chute. They can identify missing, broken, or foreign objects even in opaque containers. Designed for continuous operation, high-speed X-ray counters can handle thousands of items per minute while maintaining strict quality assurance and regulatory compliance.

United States market for X-ray High Speed Counter is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for X-ray High Speed Counter is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
