Abstracts

The global X-ray Thickness Measurement System market size is predicted to grow from US\$ 657 million in 2025 to US\$ 1137 million in 2032; it is expected to grow at a CAGR of 8.2% from 2026 to 2032.

In 2025, global sales of X-ray thickness measurement systems reached 6,850 units, with an average selling price of US\$98,000 per unit. X-ray thickness measurement systems are industrial inspection devices that utilize the attenuation properties of X-rays after penetrating materials for online, non-contact thickness measurement. They mainly consist of an X-ray source, detector, signal processing unit, automatic control system, and industrial software. These systems can achieve real-time continuous measurement of metal sheets and strips, lithium electrode sheets, plastic films, and coating materials, featuring high precision, high stability, and suitability for high-speed production lines. They are widely used in steel rolling, non-ferrous metal processing, lithium battery electrode manufacturing, and packaging material production. Upstream raw materials mainly include X-ray tubes, high-voltage power supplies, semiconductor detectors, precision mechanical structural components, industrial control chips, and software systems. Upstream material consumption is primarily driven by the core X-ray source and detector. Downstream supply relationships are with steel mills, non-ferrous metal processing enterprises, lithium battery material plants, and film manufacturers. Downstream consumption is mainly concentrated in steel and aluminum sheet production lines and new energy material production lines. In 2025, the global total production capacity was approximately 9,200 units, with an average industry gross profit margin of approximately 41%. The future lies in AI self-calibration measurement, multi-material composite testing, and online quality control upgrades for new energy production lines. Demand and business opportunities primarily stem from the need to upgrade online testing equipment driven by improved precision in high-end

manufacturing, expanded new energy battery production, and the construction of automated smart factories.
