The global X-ray Tube Die market size is predicted to grow from US$ 951 million in 2025 to US$ 1366 million in 2031; it is expected to grow at a CAGR of 6.2% from 2025 to 2031.

The X-ray tube core is the core component of the X-ray device. The main function of the X-ray tube core is to convert electrical energy into X-rays. In the medical field, it is widely used for diagnosis and treatment; in industrial technology, it is used for non-destructive testing of materials, structural analysis, spectral analysis and film exposure. When the filament is heated to a certain temperature, the X-ray tube core will emit a high-speed moving electron beam. These electron beams are accelerated by the electric field and hit the anode target surface. Due to the sudden obstruction of the electron beam, a small part of its kinetic energy will be converted into radiation energy and emitted in the form of X-rays.

United States market for X-ray Tube Die is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for X-ray Tube Die is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for X-ray Tube Die is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
