The X-ray machine tube bracket brake device includes a base fixed at the bottom of the column, and also includes a movable brake plate, a movable sleeve, and a fixed brake plate that are sequentially sleeved from top to bottom outside the rotating shaft below the base, wherein the fixed brake plate is fixed to the base. Setting, the movable sleeve and the rotating shaft are fixedly arranged, a cavity is also set between the movable brake plate and the base, and one side of the cavity is provided with a spring, and its spring force acts downward on the movable brake plate to make it press down and release it. The movable sleeve is pressed and fixed on the fixed brake plate, and an electromagnet is arranged on the other side of the cavity. The use of the braking device can realize the positioning of the tube in any direction of the horizontal plus or minus 180°, thereby greatly increasing the manipulative space of the doctor; and the operation is convenient and does not affect the continuity of the doctor's diagnosis operation.
