XBC cell is also known as full back electrode contact crystalline silicon solar cell. The most notable feature of this cell is that there is no metal grid line on the front side of the cell, the emitters of P+ and N+, the back field and the positive and negative electrodes in the corresponding area are arranged in an interdigitated interval. on the back of the battery. At the same time, XBC cells can choose P-type silicon wafers or N-type silicon wafers as substrate silicon wafers. N-type silicon wafers have high minority carrier lifetime, no light decay, and good low-light performance. P-type silicon wafers have advantages on the cost side.
