The global Xeligekimab market size is predicted to grow from US\$ 136 million in 2025 to US\$ 677 million in 2032; it is expected to grow at a CAGR of 8.8% from 2026 to 2032.

In 2025, global Xeligekimab production reached approximately 150,000 vials. Serelximab is a monoclonal antibody drug that is currently in the research or clinical development stage. It works by targeting specific immune-related receptors or inflammatory pathways to regulate the body's immune response, and is therefore used in the treatment of autoimmune diseases, inflammatory diseases, and other immune-related disorders. As an important type of biologic therapy, Serelximab is characterized by high target specificity, a well-defined mechanism of action, and potentially manageable side effects, giving it promising applications in precision medicine and immunotherapy. With the continuous advancement of global biotechnology and ongoing development of innovative antibody drugs, Serelximab has attracted increasing attention in terms of clinical indication expansion and future commercialization potential.

As one of the monoclonal antibody drugs that has attracted attention in the field of immunotherapy in recent years, Serelximab is still in a relatively early stage of market development. At present, publicly available global market data, sales scale, and production statistics remain limited, making the overall market a relatively emerging niche segment without mature data support. With the continuous growth in demand for treatments for autoimmune and inflammatory diseases, the biologics market continues to expand, providing potential development opportunities for the future commercialization of Serelximab. Meanwhile, increasing investment by global pharmaceutical companies in innovative antibody drug research and development is also promoting active progress in clinical studies and indication expansion for related products. Future market growth will mainly depend on clinical trial progress, indication approvals, medical insurance coverage capabilities, and the competitive landscape of similar targeted therapies. Overall, the Serelximab market is currently still dominated by

the research, development, and early commercialization stage, with limited short-term market size but certain long-term growth potential.
