The global Xenon Fluoride market size is predicted to grow from US\$ 140 million in 2025 to US\$ 232 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

Xenon Fluoride refers to a group of noble-gas fluorine compounds formed by the direct reaction of xenon with fluorine under controlled conditions. The most commercially relevant compound is xenon difluoride (XeF₂), a powerful, selective fluorinating and oxidizing agent widely used in semiconductor microfabrication, chemical synthesis, and materials processing. In semiconductor manufacturing, XeF₂ is particularly valued for isotropic dry etching of silicon in MEMS and microelectromechanical systems because it reacts spontaneously with silicon to produce gaseous by-products without plasma. The supply chain of xenon fluoride begins with upstream rare gas extraction, where xenon is separated from air in cryogenic air separation units (ASUs) operated by industrial gas producers. High-purity xenon is then reacted with elemental fluorine (F₂) produced via electrolysis of hydrogen fluoride in specialized fluorination facilities to synthesize xenon fluorides. Midstream processing includes purification, crystallization, and packaging in moisture-free containers due to the compound's sensitivity to hydrolysis. Downstream distribution targets semiconductor fabs, MEMS manufacturers, advanced materials laboratories, and specialty chemical suppliers, where xenon fluoride is used in microfabrication etching, fluorination reactions, and advanced research applications. In 2025, global Xenon Fluoride output was about 1,400 tons with 2,600 tons of capacity, average prices of USD 80,000 - 140,000 per ton, and gross margins around 42%.

United States market for Xenon Fluoride is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Xenon Fluoride is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Xenon Fluoride is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
