The global Xenon Short Arc Lamp market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Xenon Short Arc Lamp is a point light source with extremely high brightness. Its color temperature is about 6000K, and its light color is close to sunlight. It is a light source with the best color rendering among gas discharge lamps. It is usually made of high-temperature resistant quartz glass, with a flat shape, an inner diameter of about 25 mm, and a distance of 2.2 mm between the two electrodes. After energization, an arc is generated between the two electrodes and emits light. The arc length is much shorter than the diameter of the discharge tube, hence the name Xenon Short Arc Lamp.

With the promotion of technological innovation, Xenon Short Arc Lamp technology will continue to be optimized and improved. Xenon Short Arc Lamp is expected to achieve greater breakthroughs in terms of light source efficiency, color temperature stability, and service life. This will make Xenon Short Arc Lamp more widely used in the lighting field, and will also help promote the sustainable development of the lighting industry.
