The global XNOR Gate market size is predicted to grow from US$ 230 million in 2025 to US$ 332 million in 2031; it is expected to grow at a CAGR of 6.3% from 2025 to 2031.

The XNOR gate is a basic gate circuit in digital logic circuits. The XNOR gate has two input terminals and one output terminal. Its basic function is to perform the 'XOR' logic operation, that is, when the states of the two input signals are the same, the output is high (logic 1); when the states of the two input signals are different, the output is low (logic 0). This logical relationship can also be expressed as: when all input signals are the same, the output is true (high level), and when more than one input signal is different, the output is false (low level).

United States market for XNOR Gate is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for XNOR Gate is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
