The global Xylooligosaccharides Polymer market size is predicted to grow from US\$ 30.7 million in 2025 to US\$ 33.6 million in 2031; it is expected to grow at a CAGR of 1.6% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Xylo-oligosaccharides, also named as XOS, is a type of functional polymer sugar composed of 2-7 xylose molecules bonded with α (1-4) glycosidic bonds. XOS product specifications in the market: including: 95% XOS powder, 70% XOS powder, 35% XOS powder, 20% XOS powder, 70% XOS syrup.

Compared with other functional oligosaccharides, such as fructo-oligosaccharide (FOS) and galacto-oligosaccharide (GOS), the consumption of XOS in China increased quite slowly in recent years, due to its small serving size in downstream products and its low popularity among the Chinese public. Although FOS is currently the main functional oligosaccharide consumed in developed countries, its efficacy is not as good as that of XOS. Besides, the public's health consciousness in developed countries, such as the US, are higher than in China, which hints that products with health care function will be more popular in these countries.
