According to our LPI (LP Information) latest study, the global Xylooligosaccharides (XOS) market size was valued at US\$ 29 million in 2023. With growing demand in downstream market, the Xylooligosaccharides (XOS) is forecast to a readjusted size of US\$ 33 million by 2030 with a CAGR of 1.6% during review period.

The research report highlights the growth potential of the global Xylooligosaccharides (XOS) market. Xylooligosaccharides (XOS) are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Xylooligosaccharides (XOS). Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Xylooligosaccharides (XOS) market.

Xylo-oligosaccharides, also named as XOS, is a type of functional polymer sugar composed of 2-7 xylose molecules bonded with (1-4) glycosidic bonds. XOS product specifications in the market: including: 95% XOS powder, 70% XOS powder, 35% XOS powder, 20% XOS powder, 70% XOS syrup.

Compared with other functional oligosaccharides, such as fructo-oligosaccharide (FOS) and galacto-oligosaccharide (GOS), the consumption of XOS in China increased quite slowly in recent years, due to its small serving size in downstream products and its low popularity among the Chinese public. Although FOS is currently the main functional oligosaccharide consumed in developed countries, its efficacy is not as good as that of XOS. Besides, the public's health consciousness in developed countries, such as the

US, are higher than in China, which hints that products with health care function will be more popular in these countries.
