Y-type filter is an indispensable filtering device for the pipeline system conveying medium. Y-type filter is usually installed at the inlet of pressure reducing valve, pressure relief valve, constant water level valve or other equipment to remove impurities in the medium and protect the normal use of valves and equipment. Y-type filter has the characteristics of advanced structure, low resistance and convenient sewage discharge. The applicable media of Y-type filter can be water, oil and gas. Generally, the water supply network is 18 ~ 30 mesh, the ventilation network is 10 ~ 100 mesh, and the oil supply network is 100 ~ 480 mesh. Basket filter is mainly composed of connecting pipe, main pipe, filter blue, flange, flange cover and fasteners. When the liquid enters the filter blue through the main pipe, the solid impurity particles are blocked in the filter blue, and the clean fluid is discharged from the filter outlet through the filter blue.
