A yarn break sensor is an intelligent detection device used to monitor yarn breakage in real time during the textile production process. It uses photoelectric, capacitive, tension, or image recognition technologies to detect yarn breakage during operation. Upon detecting a yarn break, the sensor immediately issues a signal, triggering a shutdown or alarm mechanism to prevent fabric defects, equipment damage, or material waste. Modern yarn break sensors are often integrated into equipment such as automatic winders, spinning machines, and looms. They feature high sensitivity, fast response, and strong anti-interference capabilities, making them a key component in achieving automated and intelligent textile production.
