A yarn quality control system is an automated inspection system used to monitor, analyze, and optimize quality parameters during the yarn production process. It utilizes sensors, image recognition, tension control, data acquisition and analysis, and other technologies to provide real-time monitoring of yarn thickness uniformity, end-breakage rate, hairiness, twist, strength, color difference, and other indicators. This system is widely used in spinning, weaving, dyeing, and finishing processes to ensure yarn compliance, improve production efficiency, and reduce scrap. Modern systems often integrate the Internet of Things (IoT), artificial intelligence (AI), and cloud computing to enable remote monitoring and intelligent early warning, making them a crucial component of the textile industry's digital transformation.
