In 2025, global sales volume of Ytterbium Doped Potassium Gadolinium Tungstate was approximately 8,500 units. Based on standard small- and medium-sized coated finished crystal products, the global average market price was approximately USD 1,100 per unit, and the gross margin of major manufacturers was generally around 35%-55%.

Ytterbium Doped Potassium Gadolinium Tungstate is a solid-state laser gain crystal formed by doping ytterbium ions into a potassium gadolinium tungstate crystal matrix, commonly abbreviated as Yb:KGW. The crystal features a broad emission bandwidth, high absorption cross-section, low quantum defect and good polarized output characteristics, making it suitable for diode-pumped laser systems. It is mainly used in femtosecond and picosecond ultrafast lasers, tunable solid-state lasers, regenerative amplifiers and high peak-power laser systems.

The upstream of the industry chain mainly includes high-purity potassium sources, gadolinium sources, tungsten sources, ytterbium dopant sources, crucibles, fluxes, polishing materials, coating materials and crystal growth equipment. The midstream covers Yb:KGW crystal growth, oriented cutting, precision polishing, coating and testing. The downstream mainly serves research, spectroscopy metrology, medical life science, aerospace, defense military and other fields. The value of this product is mainly concentrated in high-quality crystal growth, low-defect processing, orientation control, coating consistency and adaptability to ultrafast laser systems.
