## Abstracts

The global Yttria-Based Plasma Spray Powders market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Yttria-Based Plasma Spray Powders are specialized coatings used primarily in thermal barrier applications, particularly in industries such as semiconductors, aerospace, and power generation. Yttria (Y<sub>2</sub>O<sub>3</sub>) is an oxide of yttrium, known for its high melting point, thermal stability, and chemical inertness. When applied via plasma spraying, these powders form a durable and highly resistant coating, protecting substrates from extreme temperatures, wear, and corrosion.

Powder coatings lack solvents, giving way to negligible volatile organic compound (VOC) emission into the atmosphere and reducing the risk of combustion during their usage and storage process. In addition, the powder can be easily washed when exposed to human skin, which reduces the risk of health problems for operators. ETFE is excellent in processability and able to form a thick and non-stick film layer with electrical, mechanical and chemical strength. FEP and PFA Coating Powder are low in melt viscosity and excellent in melt fluidity which can give a coating free of pinholes.
