The research report highlights the growth potential of the global Yttrium Hydride market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Yttrium Hydride are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Yttrium Hydride. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Yttrium Hydride market.

Yttrium hydride is a compound of hydrogen and yttrium. It is considered to be a part of the class of rare-earth metal hydrides. It exists in several forms, the most common being a metallic compound with formula  $YH_2$ .  $YH_2$  has a face-centred cubic structure, and is a metallic compound. Under great pressure, extra hydrogen can combine to yield an insulator with a hexagonal structure, with a formula close to  $YH_3$ . When containing a substantial amount of oxygen, yttrium hydride is also found to exhibit reversible photochromic properties. This switchable optical property enables their utilization in many technological applications, such as sensors, goggles, and medical devices in addition to the smart windows. Yttrium hydride is being looked at as a neutron moderator for use in new nuclear reactor designs.
