Yttrium oxide is an excellent mineralizing agent for spinel formation. It has a high melting point(2450oC), chemical stability, low coefficient of thermal expansion, high transparency for both visible (70%) and infrared (60%) light, low cut off energy of photons.

Yttrium oxide is used in various electronic components, such as capacitors, sensors, and transistors. The growing demand for electronic devices, including smartphones, tablets, and computers, drives the need for yttrium oxide in their manufacturing. Yttrium oxide's properties, such as high dielectric constant and thermal stability, make it suitable for electronic applications.
