According to our (LP Info Research) latest study, the global Yttrium Oxide Thermal Spray Powder market size was valued at US\$ 31 million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Yttrium Oxide Thermal Spray Powder is forecast to a readjusted size of US\$ 48 million by 2029 with a CAGR of 6.7% during review period.

The research report highlights the growth potential of the global Yttrium Oxide Thermal Spray Powder market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Yttrium Oxide Thermal Spray Powder are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Yttrium Oxide Thermal Spray Powder. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Yttrium Oxide Thermal Spray Powder market.

Yttrium oxide is a highly stable compound with a high melting point and is very inert chemically. Yttrium oxide is also known to possess excellent plasma-etch and erosion resistance, particularly in plasmas containing halogen species. In addition, yttrium oxide exhibits excellent electrical insulation (volume resistivity and dielectric breakdown strength).

Semiconductor manufacturing equipment is a medium tool for achieving semiconductor manufacturing processes, playing an important role in all aspects. According to SEMI,

worldwide sales of semiconductor manufacturing equipment increased 5% from \$102.6 billion in 2021 to an all-time record of \$107.6 billion in 2022.

In recent years, the localization process of China's semiconductor industry has further accelerated, and the performance of semiconductor equipment is more flexible than the overall industry. The localization of semiconductor equipment is ushering in a golden wave, and domestic semiconductor equipment is facing more opportunities for verification and trial use, technical cooperation, and import substitution. For the third consecutive year, China remained the largest semiconductor equipment market in 2022 despite a 5% slowdown in the pace of investments in the region year over year, accounting for \$28.3 billion in billings.

The record high for semiconductor manufacturing equipment sales in 2022 stems from the industry's drive to add the fab capacity required to support long-term growth and innovations in key end markets including high-performance computing and automotive. Additionally, the results reflect investments and determination across regions to avoid future semiconductor supply chain constraints like those that surfaced during the pandemic.
