According to this study, the global Z-Wave Automation market size will reach US\$ 2219 million by 2031.

Z-Wave was developed by Zensys as a proprietary wireless standard, which was later acquired by Sigma Designs in 2008. Z-Wave is a wireless home automation protocol which runs on 908.42 MHz frequency band. Z-Wave technology works on the principle of mesh network technology, which means that one Z-Wave product will pass the signal to another until it reaches its intended destination. Z-Wave technology uses low-power radio embedded or retrofitted RF signals in home -electronics devices and systems such as home entertainments and household appliances, among others.

Due to greater discretionary income, consumers' lifestyles are altering substantially, particularly in urban regions. Professionals and workaholics lives are being made easier by the emergence of luxurious and technologically advanced products. In the upcoming years, this would help to drive the sector. Additionally, as people's discretionary money has increased, they have begun to consider their social status, which has resulted in greater spending on goods like Residential Automation.
