## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

A corn-derived, white to yellowish, floury powder that works as a handy helper ingredient to create nice feeling emulsions.

Zea mays (corn) starch can replace talc in personal care formulations. It offers improved oil and moisture absorbency when compared to talc in skin lotion formulations (below 3%). Because of its botanical nature, it is safe for topical use in baby powder products. In addition, since starch 'rolls' as it moves over the skin, there is a perceivably better skin smoothness with Zea mays (corn) starch over talc.

Zea mays (corn) starch is compatible with a wide variety of other personal care ingredients. Depending on the application, the level of starch added can range from 1–99%. In lotions, 0.5–3% corn starch is incorporated to reduce tack and oiliness, whereas the starch is formulated up to 30% in cream to powder formulations and up to 99% in topical body powders.
