## Abstracts

According to this study, the global Zero Energy Buildings (ZEBs) market size will reach US\$ million by 2031.

Zero-energy buildings consume only as much energy as they generate within a year. They are the target for green building construction and modification over the next several years. Green building practices have become common in the global construction industry. The aim is to utilize only as much energy as buildings produce onsite through renewable energy systems. With growing GHG emission levels and increasing energy costs, residential and commercial building owners are taking initiatives to improve the energy efficiency of buildings.

Policies and programs play a vital role in driving the overall market. The market is expected to witness significant changes over the coming years owing to various initiatives and evolving building codes led by the cities, states, and district authorities. Schools and public structures are expected to lead the ZNE projects in developed and developing countries. The codes are being focused on appropriately implementing policies & programs and establishing energy targets to support ZNE in future.
