The zero gravity seat combines human skeleton and repeatedly carries out pressure distribution research experiments. By fully increasing the stress area of the human body and the seat, the pressure on all parts of the body is evenly distributed on the seat back cushion, so as to achieve the best comfort. In such a lying posture, the pressure of the user's body when riding will be distributed to the legs, hips and waist, without local pressure, making people feel like floating on the water or clouds without pressure, enjoying extreme comfort.
