According to our LPI (LP Information) latest study, the global Zero Liquid Discharge (ZLD) market size was valued at US\$ 431.9 million in 2023. With growing demand in downstream market, the Zero Liquid Discharge (ZLD) is forecast to a readjusted size of US\$ 663.7 million by 2030 with a CAGR of 6.3% during review period.

The research report highlights the growth potential of the global Zero Liquid Discharge (ZLD) market. Zero Liquid Discharge (ZLD) are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Zero Liquid Discharge (ZLD). Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Zero Liquid Discharge (ZLD) market.

Zero liquid discharge (or ZLD) is a type of wastewater treatment technique, wherein almost all of the wastewater generated is recycled and purified. This eliminates discharge of any liquid at the end of the process, resulting in zero discharge of water. The zero liquid discharge wastewater treatment comprises several processes such as reverse osmosis, ultrafiltration, fractional electrode ionization, and evaporation & crystallization. A well-designed, efficient, and effective zero liquid discharge wastewater treatment system should be capable of handling any fluctuations in waste contamination and flow rate and capable to recover around 95% to 99% of water for reuse.
