The global Zero Phase Current Transformer market size is predicted to grow from US$ 433 million in 2025 to US$ 604 million in 2031; it is expected to grow at a CAGR of 5.7% from 2025 to 2031.

Zero phase current transformers also known as core balance current transformers (CBCT), detect the presence of zero sequence currents during short circuit fault conditions such as the occurrence of a single line to ground fault that causes unbalanced currents in three-phase systems. Zero phase current transformers are widely used in circuit leakage current protection such as residual current circuit breakers, leakage current protection switch and so on. When the input line and loop current are not equal, e.g., neutral line is disconnected, power supply for electric energy meter is generated by secondary winding. So, it can achieve the purpose of electricity theft prevention. Zero phase current transformers can also be used for current sensing or circuit contorl. It will provide constant voltage when input the current for one or more turns.

United States market for Zero Phase Current Transformer is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Zero Phase Current Transformer is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
