Zero Pressure Balloon is a special type of balloon whose internal gas pressure is equal to or nearly equal to the external atmospheric pressure. A zero pressure balloon is a balloon designed to keep the internal gas pressure balanced or nearly balanced with the external atmospheric pressure during flight. Such balloons are usually made of lightweight, high-strength materials, such as polyethylene, to ensure their stability and durability when flying at high altitudes. The working principle of zero pressure balloons is mainly based on their unique pressure balance design. During flight, as the external atmospheric pressure changes, the gas pressure inside the balloon will also be adjusted accordingly to maintain the balance of internal and external pressures. This balance helps to reduce the risk of deformation and failure of the balloon during flight, thereby improving its stability and durability.
