The global Zinc Battery Material market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Zinc offers the optimal solution, when compared with the traditional Pb-Acid starter battery and the still young Li-Ion systems. Zinc has the distinct advantage of cost, energy content and operational performance against Pb-Acid in stationary batteries. Zinc is also cheaper, more available, more sustainable, (environmental impact and recycling) and safer than Li-Ion, making it a credible candidate for e-buses, scooters, bikes and forklifts in addition to on-grid and off-grid stationary storage systems in domestic and industrial power, telecom and emergency systems.

United States market for Zinc Battery Material is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
