Zinc carbon batteries are a type of primary (non-rechargeable) battery commonly used for low-power applications. They consist of a zinc anode and a carbon cathode, with an electrolyte that facilitates the chemical reactions needed to generate electricity. Known for their cost-effectiveness and availability, zinc carbon batteries are typically used in devices such as remote controls, flashlights, and low-drain electronics. While they offer a lower energy density and shorter lifespan compared to alkaline batteries, they are suitable for applications that require moderate power over an extended period. Their simplicity and reliability make them a popular choice for everyday household items.
