The global Zinc Carbon Cylindrical Battery market size is predicted to grow from US\$ 1300 million in 2025 to US\$ 1899 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

A zinc carbon cylindrical battery is a specific type of primary (non-rechargeable) battery characterized by its cylindrical shape and construction. It features a zinc anode, a carbon cathode, and an electrolyte, typically ammonium chloride or zinc chloride, which facilitates the chemical reactions that generate electrical energy. These batteries are commonly used in low-power applications, such as remote controls, flashlights, and small electronic devices. While they are cost-effective and readily available, zinc carbon cylindrical batteries have a lower energy density and shorter lifespan compared to alkaline batteries. Their design and performance make them suitable for devices that require moderate power over extended periods.
