Zinc phosphating is a surface treatment process used to improve the corrosion resistance of metal surfaces. It involves the formation of a zinc phosphate coating on the metal substrate through a chemical reaction between the metal surface and a phosphating solution containing zinc and phosphate ions. This coating provides an additional barrier against corrosion and also improves the adhesion of subsequent coating layers, such as paint or powder coating. Zinc phosphating is commonly used on steel and other ferrous metals in various industries, including automotive, aerospace, and construction.
