The global Ziner Diode Array market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Ziner diodes not only allow current to flow from the anode to the cathode, but also back when the Ziner voltage is reached. This type of device can be used as a voltage reference and to adjust the voltage on small circuits. Ziner diode networks or arrays are devices consisting of two or more diodes encapsulated in a single sheet. These diodes can be isolated from each other or connected to a common anode or cathode circuit type.
