The zipper is a connecting device, which is mainly composed of chain elements, sliders, upper and lower stops (front code and rear code) or locking parts. Among them, the chain elements are the key part, which directly determines the side pull strength of the zipper. Generally, a zipper has two chain belts, each chain belt has a row of chain elements, and the two rows of chain teeth are staggered with each other. The slider clamps the chain elements on both sides, and slides with the help of the pull tab to engage or disengage the chain elements on both sides. The upper and lower stops are used to fix both ends of the zipper to prevent the slider from sliding out.
