The report requires updating with new data and is sent in 48 hours after order is placed.

Sintered zirconia is hard and therefore difficult to fabricate. For that reason, zirconia crowns and bridge restorations are made from a pre-sintered zirconia disc, which shrinks only about 21%, using a computer-aided design and computer-aided manufacturing (CAD/CAM) system. The fabricated zirconia dental appliance is then sintered to ensure its hardness. Zirconia Dental Material in this report refers to zirconia CAD/CAM blocks and Discs.
