Zoom stereo trinocular microscopes provide a 3-dimensional or 'stereo' image when looking through the microscope. The zoom feature on the zoom stereo trinocular microscope provides a range of viewing possibilities, and is the single feature that is most useful when selecting a stereoscope. The zoom knob on a stereo microscope provides magnification within a large range (for example, 0.7x - 4.5x) and ultimately allows the ability to view every single magnification (7x, 8x, 9x, etc.) when zooming in on the microscopy sample. Stereo zoom microscopes allow quick zoom from low to high magnification. Using a stereo zoom microscope makes it simple to view a sample in the entire field of view, then focus and zoom in on a particular part of interest.

The global Zoom Stereo Trinocular Microscope market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
