The global High Base Number Sulfurized Calcium Alkyl Phenol market size is predicted to grow from US\$ 275 million in 2025 to US\$ 363 million in 2032; it is expected to grow at a CAGR of 4.0% from 2026 to 2032.

High Base Number Sulfurized Calcium Alkyl Phenol is an important lubricating oil additive. Its main functions are to neutralize acidic substances produced by engine combustion and to provide antioxidant protection, keeping the engine clean and improving its high-temperature performance and wear resistance. It is prepared by sulfonation, calcination, and subsequent high-alkaline treatment of dodecylphenol. It possesses excellent detergency, high-temperature thermal stability, and oil solubility, and is often used in combination with other additives such as sulfonates.

The upstream segment consists of basic chemical raw materials, with core raw materials including alkylphenols, alkaline calcium sources (such as calcium oxide or calcium hydroxide), vulcanizing agents, and mineral or synthetic oils used as diluent oils. It possesses excellent high-temperature detergency, strong acid neutralization capabilities, and anti-oxidation and anti-corrosion properties, significantly controlling carbon deposits on piston rings. It is mainly used in marine cylinder oils and medium-to-high-grade internal combustion engine oils. Global sales are projected to reach 65,000 tons in 2025, with an average selling price of US\$4,330 per ton. The gross profit margin is approximately 28%.
